

# VINTEC

## Quickstart Guide

# Before turning your cabinet on

---

**DO NOT SWITCH ON FOR  
AT LEAST 24 HOURS**

after transport to allow refrigerant gases to settle.

## **LEVEL**

Level your wine cabinet before loading. Un-levelled cabinets can be noisy, and doors may not close or seal properly.

## **FILL**

Fill the cabinet with bottles before you turn it on. If you don't have enough bottles, spread them evenly throughout the cabinet.

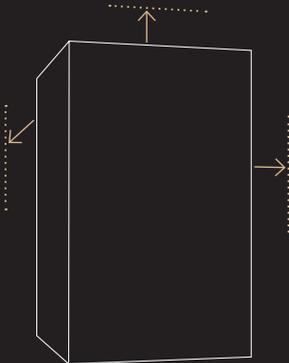

## **TEMPERATURE**

Check desired temperature setting (6°-13° for serving whites and sparklings/Champagne, 12°-14° for all cellaring, and 13°-18° for serving reds).

# Installation and ventilation

---

**WARNING:** You **MUST** refer to model-specific ventilation requirements listed in the user manual or on the Vintec website when installing your cabinet.

See user manual for model-specific dimensions

## FOR ALL MODELS:

**DO NOT** put cabinets in direct sunlight

**DO NOT** expose cabinets to moisture or rain

**DO NOT** place cabinets outdoors

**DO NOT** place cabinets near heat sources such as ovens

**DO NOT** place a door in front of cabinets or put them in a closed confined space (eg. small rooms such as pantries, closets or under staircases)

# Have you noticed:

---

## **FREQUENT FAN CYCLE**

This ensures slow and even distribution of cool air throughout the cabinet, limiting temperature variations.

## **SPACER/STOPPER**

Ensures adequate ventilation behind unit.

## **WATER ON THE DOOR OR FLOOR**

In hot/humid climates and particularly on hot days, humidity in the ambient air can condense on the cabinet's cold glass door.

## **ICE FORMING**

If the door seal is compromised or left slightly ajar the compressor will keep running which may cause ice formation on the back wall.

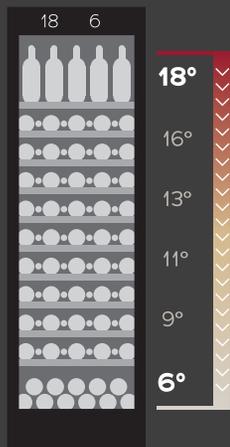

# Multi-Temp

Multi-Temp provides flexibility to store all your varietals at a perfect serving temperature. In Multi-Temp mode, the cabinet creates a vertical temperature gradient, allowing you to arrange wines from top-to-bottom at the appropriate serving temperatures for each bottle in your collection. Refer to the diagrams to understand how the Multi-Temp feature distributes the temperature gradient based on settings.

# Storing and stacking

---

## Different shapes and sizes

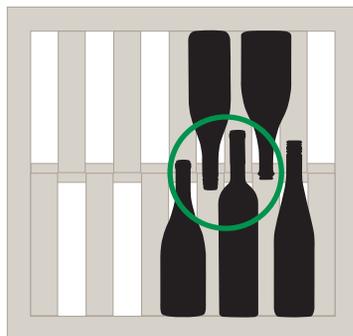

---

When quoting capacity, Vintec refers to all standard bottle shapes shown below.

Wine producers use a huge range of different bottles. The unique design of Vintec shelves allow for storing and stacking of most dimensions and proportions.
